PDF | Groundwater Modelling is an efficient tool for groundwater management and remediation. Models are a simplification of reality to investigate certain phenomena or to predict future behaviour.

Simplified Hydro-stratigraphic 3D Groundwater Model Fact Sheet Overview The 3D models are intended to provide a convenient way of visualising the distribution of simplified hydro-stratigraphic layers across Natural Resource Management (NRM) regions, providing a basic understanding of the main aquifers and groundwater quality in each NRM region.

anisotropic aquifer in which groundwater flow is transient), the mathematical model is commonly solved approximately using numerical techniques. Ever since the 1960s, when computers first become widely available, numerical models have been the preferred type of model for analyzing groundwater flow and transport.

GSFLOW: Coupled Ground-water and Surface-water FLOW model v. 1.2.2 GSFLOW is a coupled groundwater and surface-water flow model based on the USGS Precipitation-Runoff Modeling System (PRMS), MODFLOW-2005, and MODFLOW-NWT. Groundwater Management (GWM) Process v. 1.5.2 GWM is used to simulate groundwater management.
