Installation and operation of apparatus, equipment, structures, materials and systems for the safe, reliable and economic generation, transmission, distribution, conversion, measurement and control of electric energy.

### **IEEE Xplore: IEEE Transactions on Power Delivery**

IEEE 1394 is an interface standard for a serial bus for high-speed communications and isochronous real-time data transfer. It was developed in the late 1980s and early 1990s by Apple, which called it FireWire. The 1394 interface is also known by the brands i.LINK (), and Lynx (Texas Instruments).. The copper cable it uses in its most common implementation can be up to 4.5 metres (15 ft) long.

### **IEEE 1394 - Wikipedia**

The Journal covers all issues of widespread or generic interest to engineers who work in the field of power electronics. The Journal editors will enforce standards and a review policy equivalent to the IEEE Transactions, and only papers of high technical quality will be accepted.

Slide 4 Why so many 1394 specifications? Æ IEEE 1394-1995 Provides Architecture and Fundamental Transport Services Æ Only a few enhancements to the standard:

### **1394 Standards and Specifications Summary**

USB (abbreviation of Universal Serial Bus) is an industry standard that establishes specifications for cables, connectors and protocols for connection, communication and power supply between personal computers and their peripheral devices. Released in 1996, the USB standard is currently maintained by the USB Implementers Forum (USB IF). There have been three generations of USB specifications ...

Example: Calculate Size of Bus bar having Following Details Bus bar Current Details: Rated Voltage = 415V,50Hz , Desire Maximum Current Rating of Bus bar =630Amp. Fault Current (Isc)= 50KA ,Fault Duration (t) =1sec. Bus bar Temperature details: Operating Temperature of Bus bar ( $\hat{I}_1$ )=85 $\hat{A}^{\circ}$ C. Final Temperature of Bus bar during Fault( $\hat{I}_1$ )=185 $\hat{A}^{\circ}$ C.

Types of Neutral Earthing in Power Distribution: Introduction: In the early power systems were mainly Neutral ungrounded due to the fact that the first ground fault did not require the tripping of the system. An unscheduled shutdown on the first ground fault was particularly undesirable for continuous process industries. These power systems required ground detection

### **Types of Neutral Earthing in Power Distribution**

Broken (loose) neutral. If the Neutral Conductor is opened, broke or lost at either of its source side (Distribution Transformer, Generator or at Load side Distribution Panel of Consumer), the distribution system's neutral conductor will float or lose its reference ground Point.
