Definition. A matrix is a rectangular array of numbers or other mathematical objects for which operations such as addition and multiplication are defined. Most commonly, a matrix over a field  $F$  is a rectangular array of scalars each of which is a member of  $F$ . Most of this article focuses on real and complex matrices, that is, matrices whose elements are real numbers or complex numbers ...

## Matrix (mathematics) - Wikipedia

In mathematics, a tensor is an arbitrarily complex geometric object that maps in a (multi-)linear manner geometric vectors, scalars, and other tensors to a resulting tensor. Thereby, vectors and scalars themselves, often used already in elementary physics and engineering applications, are considered as the simplest tensors.

## Tensor - Wikipedia

Many of the operations that can be performed with scalars, vectors, and matrices can be reformulated to be performed with tensors. As a tool, tensors and tensor algebra is widely used in the fields of physics and engineering.
