In communication systems, signal processing, and electrical engineering, a signal is a function that "conveys information about the behavior or attributes of some phenomenon". A signal may also be defined as an "observable change in a quantifiable entity". In the physical world, any quantity exhibiting variation in time or variation in space (such as an image) is potentially a signal that ...

Chapter 5: Linear Systems. Most DSP techniques are based on a divide-and-conquer strategy called superposition. The signal being processed is broken into simple components, each component is processed individually, and the results reunited.

In mathematics, Fourier analysis ($\int_{-\infty}^{\infty} f(x) e^{-i\omega x} dx$) is the study of the way general functions may be represented or approximated by sums of simpler trigonometric functions. Fourier analysis grew from the study of Fourier series, and is named after Joseph Fourier, who showed that representing a function as a sum of trigonometric functions greatly simplifies the study of heat transfer.

example, there are 2 samples that have a value of 110, 8 samples that have a value of 131, 0 samples that have a value of 170, etc. We will represent the histogram by H_i , where i is an index that runs from 0 to $M-1$, and M is the number of possible values that each sample can take on. For instance, H_{50} is the number of samples that have a value of 50.

A CBM program consists of three key steps (see Fig. 1): 1. Data acquisition step (information collecting), to obtain data relevant to system health. 2. Data processing step (information handling), to handle and analyse the data or signals collected in step 1 for better understanding and interpretation of the data.

All motion pictures were released to theatres on 35mm cellulose nitrate film, which was an unstable and highly flammable material. The main reason films from this era are "lost" is due to theatre fires, along with negatives and prints decomposing.
