In physics and cosmology, digital physics is a collection of theoretical perspectives based on the premise that the universe is describable by information. It is a form of digital ontology about the physical reality. According to this theory, the universe can be conceived of as either the output of a deterministic or probabilistic computer program, a vast, digital computation device, or ...

The Many-Worlds Interpretation (MWI) of quantum mechanics holds that there are many worlds which exist in parallel at the same space and time as our own. The existence of the other worlds makes it possible to remove randomness and action at a distance from quantum theory and thus from all physics ...

Many-Worlds Interpretation of Quantum Mechanics (Stanford)

To make interacting photons, the team shone a weak laser through a cloud of cold rubidium atoms. Rather than emerging from this cloud separately, the photons within the laser merged bound in groups of three.

Most of it is completely inhospitable and hostile to life is a general objection to a general teleological argument on the cosmological level (like how the argument from bad design is an objection to a general teleological argument on the biological level).

The Fine-Tuning Argument, Generalized

The second law of thermodynamics, also known as the law of entropy, is considered one of the most fundamental laws of the universe. This law states that the disorder in the universe is constantly increasing in a single direction.
